

Adapt-a-pak

New From Remote Audio!

Anyone who works in audio knows the value of adapters. Getting out of one hole and into another can be critical. Well, anyway..... you know what I mean. Most of the time you have adapters but it's never the one you need or your always tempted to stick four of them together for some Star Wars contraption.

Adapt-a-pak is a specially selected group of adapters collected in one case for convenient use in the field. There are 55 adapters total, of 26 types. The case is constructed of clear plastic making possible a quick visual confirmation of what you have. This case also includes dividers which eliminates the need to rummage through a pile of adapters in your bag.

Try pricing these adapters individually. It's not pretty. The following connectors are included:

- | | |
|---|--|
| 2) 1/4" mono / 3.5 mm mono | 2) BNC 2 way splitter |
| 4) 1/4" mono / RCA jack | 2) BNC female / 3.5 mm mono male |
